

Protocol for Those Vaccinated with Covid-19
Protocol for Covid-19 Vaccine Shedding
Spike Protein Removal Protocol
Graphene Oxide Removal Protocol
Hydrogel Removal Protocol
Nanoparticle Removal Protocol

These protocols are to protect those who have been injected with the spike protein – mRNA – graphene oxide – hydrogel – nanoparticles
These same protocols are useful to protect those concerned with shedding of the spike protein and graphene oxide coming off those who have been injected with Covid-19 injections.
This shedding is from one person to another, affecting even the unvaccinated person.

So if you know someone who has been injected and requires help, please provide them with this information.

These protocols are continually updated as new developmental research.

What is Graphene Oxide (GO)?

The latest research on the Covid-19 'Vaccine' is revealing harmful substances (*poisons*) within the "vaccine". One of these substances is called graphene oxide (GO).

It has been said that graphene oxide (GO) was being used in flu jabs in 2019 as an adjuvant — an adjuvant is a toxin used in big pharma injections to call in the immune system to activate a "vaccine".

The bombshell research is by **Dr Pablo Madrid** and **Dr. José Luis Sevillano** found graphene oxide to be the #1 ingredient in Covid-19 'Vaccines' in the samples they tested via electron microscope and spectrograph stating 99+% of the samples tested were graphene oxide.

Multiple studies now show that graphene oxide, plus SM-102 and spike protein are **ALL toxic poisons and allergens** which are contained in the Covid-19 'Vaccine' Vials. When exposure is high and is found directly into the blood, it can accumulate in the reproductive organs, brain, lungs, heart and other organs of the body where they damage and permanently destroy cells.

The graphene oxide (GO) and the spike protein also 'shed' from one person to another.

Graphene Oxide (GO) discoveries:

- GO is magnetic (especially at the injection site.)
- GO fibres are in plastic masks.
- GO fibres are on PCR test swabs.
- GO is in all Covid-19 vaccines.
- GO creates thromboses.
- GO causes blood clots.
- GO disrupts the immune system.
- GO can trigger a cytokine storm.
- GO toxicity can instigate pneumonia.
- GO creates a metallic taste in the mouth.
- GO causes inflammation of the mucous membranes.
- GO produces a loss in the sense of taste and smell.
- GO blocks detoxification in the body by blocking the human body's super detoxifier: glutathione.
- GO may be activated/affected by 5G frequencies.
- GO was already included as an adjuvant in the flu shots in 2019.
- GO passes thru the blood-brain barrier.

This discovery about graphene oxide confirms that the different injections may be being used containing a varied formulation of ingredients:

- Some are high in spike protein;
- Others are high in graphene oxide (GO);
- Yet still other injections are just saline placebos!!!
- There are likely many variations amongst each individual company's job products.

WHAT CAN I DO?

Repurposed Therapeutic Drugs – HCQ and Ivermectin

There is a group of therapeutic medication (*meaning over-the-counter*) called Anthelmintics, or antihelminthics.

Anthelmintics are known as an antiparasitic medication that expel parasitic worms and other internal parasites from the body by either stunning or killing them and without causing damage to the host.

As surprising as it sounds, there is scientific documented research about the repurposing the designated use of these Anthelmintic Therapeutic medication to assist and treat many other health issues. One of the health issues that benefits from anthelmintics cancer, and especially their effect on cancer, as this rather tasteless repurposed therapeutic medication has been shown to exhibit “significant inhibition (*shrinking*) of tumor growth” when supplemented with vitamins A, D, E, K, and B. *Ref link:* <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2687140/>

In the global news media there have been two Anthelmintic Therapeutic medications hitting the headlines. One is Hydroxychloroquine (HCQ) and the other is called Ivermectin.

Research into these two alone are showing great promise against covid, against the “vaccine”, against “vaccine shedding,” but also against hydrogels containing graphene oxide. The hydrogels are also found on PCR test swabs.

Fenbendazole and **Mebendazole** are also Anthelmintic Therapeutic medications akin to HCQ and Ivermectin, but these are more easily available over-the-counter in local pharmacists or veterinaries as a simple worm treatment. (*See Panacur Protocol and Mebendazole Protocols*)

Package Contents: Three 4-gram packets **Each Packet Treats 40 lbs.**

MERCK Animal Health
panacur^c (fenbendazole)
Canine Dewormer

Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitism.

Drug Facts
Active Ingredients (in each dosage unit): Fenbendazole Granules 22.2% (222 mg/g)
Purpose: Dewormer for Dogs Only
Use: For the treatment and control of Roundworms (*Toxocara canis*, *Toxascaris leonina*), Hookworms (*Ancylostoma caninum*, *Uncinaria stenocephala*), Whipworms (*Trichuris vulpis*), and Tapeworms (*Taenia* spp.).
Human Warning: Keep this and all medication out of the reach of children.
Adverse Reactions: In US clinical studies 3 of 240 dogs (about 1% of the treated dogs) had vomiting associated with use of the product.
When using this product: Panacur^c C is safe for use in puppies 6 weeks or older and adult dogs, including pregnant litters. Do not deworm a dog or puppy that is sick. Consult your veterinarian for diagnosis of the illness.

PHARMACY MEDICINE
KEEP OUT OF REACH OF CHILDREN
Combantrin-1
with **Mebendazole**
CHOCOLATE SQUARES
single square treatment for threadworm
4 MEBENDAZOLE CHOCOLATE SQUARES
EACH SQUARE CONTAINS 100 mg MEBENDAZOLE. AUST R 72802

PHARMACY MEDICINE
KEEP OUT OF REACH OF CHILDREN
Vermox KILLS WORMS
CHOC CHEWS
one tablet - once!
Treatment for threadworm
6 CHOCOLATE FLAVOURED CHEWABLE TABLETS
MEBENDAZOLE 100mg AUST R 17638

Dosage:
Take 1 x 100mg tablet every day for 9 consecutive days in every month.
Repeat this protocol every month.

deWorm
NEW!
deWorm EXTRA STRENGTH
Eliminates Intestinal Threadworm
Hookworm, Whipworm & Roundworm with a single dose tablet
6 Chocolate Flavoured Chewable Tablets
MEBENDAZOLE USP 100mg

AVAILABLE FROM ANY CHEMIST

Some experts state that Vermox is the most reliable source of mebendazole as all scientific studies used the Vermox brand.

MMS Protocol

“It is not a cure to A disease...

It is a solution for ALL disease.”

There is another protocol that has been said to be **“The Universal Antidote” – MMS.**

MMS (Miracle Mineral Solution) has been used globally for nearly two decades.

This protocol has been successful indeed as a universal antidote in the detoxification of pathogens, virus, bacterium, Morgellons, nanoparticles, hydrogels, thus it is successful in assisting most health issues, disease(s), autism, even degenerative diseases such as cancer.

The **MMS Protocol** has been heavily censored during the covid plandemic. Valuable information and protocols, along with videos, video tutorials can all be found at the links below.

+ Activator

NOTE: Below is a NUTRITIONAL Protocol to Assist and Prevent Damage from Spike Protein and Derivatives due to Injection and to Protect from Spike Protein Shedding:

Spike Protein Protocol

Summary of the Spike Protein and Graphene Oxide Detoxification Protocol

This is the updated Nutrition protocol to protect those who've been injected with spike protein, graphene oxide and mRNA and the same protocol is useful to protect those concerned with the spike protein and graphene oxide shedding coming off those who've been injected. We now have evidence of the latest injections containing: mRNA, spike protein, graphene oxide, SM-102, and numerous other potentially toxic substances (also: some—but not all—injections, appear to be higher in graphene oxide and some appear to be saline placebos).

If you know someone who has been injected and requires help, please provide them with this Nutrition Protocol:

- **Borax Powder** – 1/8 to 1/4 teaspoon taken daily dissolved in 1 litre of water and sipped throughout the day
- **Coated Silver** (1-6 drops per day, depending on degree of exposure) (Coated silver blocks the sulfur-bearing protein on the spikes from entering the cell. Sulfur-rich amino acids on the spike protein interact with silver causing them to fold incorrectly).
- **NAC** (N-acetyl cysteine) (accelerates detoxification and is considered a producer of the super detoxifier glutathione in the body) Dosage: 1200-2400 mg per day on an empty stomach. NAC is recommended to detoxify graphene oxide and SM-102. NAC is tough to find after the FDA recently made it illegal to purchase over the counter in the USA. Request NAC from your doctor!
- **Zinc** (30-80mg per day depending on immunological pressure)
- **Vitamin D3*** (10,000 IU's per day)
- **Lypospheric Vitamin C** (30ml, twice daily)*
- **Quercetin** (500-1000 mg, twice daily)*
- **Iodine*** (dosage depends on brand, more is not better. Iodine is a product you have to start with small dosages and build up over time.
- **PQQ*** (20-40 mg per day)

Shikimate Main Sources:

- **Pine Needle Tea** for shikimic acid or shikimate (from green edible pine needles) There are toxic pine needles, be careful! When drinking pine needle tea, drink the oil/resin that accumulates too! Shikimate, shikimic acid and their derivatives possess: cancer fighting, antiviral, antimicrobial, anticoagulant and antithrombotic properties.
- **Fennel and/or Star Anise Tea:** These are also an excellent source of shikimate or shikimic acid (which is known to neutralize the spike protein)
- **Charcoal** (2-4 capsules a day): Charcoal is the pre-eminent detoxifier and when taken on an empty stomach, works its way down into the intestines and activates a blood purification process known as "interstitial dialysis". Our Kohlbitr* product is the premier activated coconut charcoal in the world and we also now offer the more gentle birch charcoal.*

- **C60** (1-3 droppersfull per day): One of the issues we are seeing with those who have been injected is disturbances in their energetic field (magnetism) and hot spots of inflammation. C60 is a rich-source of electrons and acts like a fire extinguisher to inflammation and simultaneously (because it bio-distributes throughout the body) drives a normalization of electron flow throughout the body. In this category, we offer two products, the traditional C60 product* is made by yours truly and the C60 SuperConcentrate* is made by a carbon scientist friend of mine and contains a higher concentration of electrons. C60 is recommended to neutralize s.pike protein, detoxify graphene oxide and SM-102.
- **Citrus fruit** (especially blood oranges, due to their high hesperidin content — hesperidin is a chalcone like quercetin that deactivates spike protein)
- **Peppermint** (very high in hesperidin)

Superherbs to help disable spike protein:

- **Schizandra Berry*** (high in shikimate)
- **Triphala** formulations: In Sanskrit, the word Triphala means “three fruits”: a combination of Indian gooseberry (*Embluca officinalis*), black myrobalan (*Terminalia chebula*) and belleric myrobalan (*Terminalia bellerica*). The terminalia fruits are rich in shikimate.
- **St. John’s Wort** (shikimate is found throughout the entire plant and in the flowers)
- **Comfrey Leaf** (rich in shikimate)
- **Feverfew** (leaves and flowers are rich in shikimate)
- **Gingko Biloba Leaf** (rich in shikimate)
- **GiantHyssop** or Horsemint (*Agastache urtifolia*) (rich in shikimate)
- **Liquid Ambar** (Sweet Gum tree) A tea of the spiky seed pods is rich in shikimate.

Foods:

- **Carrots** and Carrot Juice (rich in Shikimate)
- **Dandelion Leaf** (Common dandelion (*Taraxacum officinale*) efficiently blocks the interaction between ACE2 cell surface receptor and spike protein D614, mutants D614G, N501Y, K417N and E484K in vitro)

Plant Sprouts:

- **Wheatgrass** and Wheatgrass Juice (the young blades are high in shikimate)
- **Legume family** - beans that are generally considered to be rich in shikimate.
- **Sprouts** - I have found testing of 5 sprouts and all were rich in shikimate: red kidney bean (*Phaseolus vulgaris*), moth bean (*Vigna aconitifolia*), soy bean (*Glycine max*), mung bean (*Vigna radiata*) and alfalfa (*Medicago saliva*). All these were analysed for their shikimic acid content during germination: so the sprouting process is key to activate shikimate production.

Enzymes:

- **Nattokinase** (enzyme) and Natto is a traditional Japanese food made from soybeans fermented with *Bacillus subtilis* var. natto. Natto (also rich in vascular protective Vitamin K2) and Nattokinase have a history of being used to prevent blood clots. The idea is here is that the enzyme Nattokinase goes to work dissolving clots. 2000-4000 Fibrinolytic Units per day (2-4 capsules) with or without food.
- **Serrapeptase** (enzyme): is an anti-inflammatory proteolytic enzyme in the trypsin family. Like other proteolytic enzymes, serrapeptase helps break down proteins into smaller particles. It can promote healing by reducing fluid and debris accumulation that occur around necrotic or injured tissue. Dosage: 100-200 mg on an empty stomach per day.

Oxygen Therapies:

- **Ozone and Oxygen** therapies are effective at degrading spike protein and graphene oxide.
- **MMS Protocol** (*as listed above*)

All forms are recommended from consuming MMS to drinking ozonated water or using ozonated water for enemas and even ozone injections by a trained health professional.
